## QUIZ:

Add a new feature to the program written in lab experiment:

Write required function(s) to determine odd numbers in the data set. Use given function prototypes.

```
int* FindOddNumbers(int* data_array, int data_size);

void PrintNumbersForMarkedIndexes(int* data_array, int* marked_indexes, int data_size);
```

Sample Ouput:

```
C:\Windows\system32\cmd.exe                                              —    □    ×

+-----------+
| USER INPUT |
+-----------+
 Enter the 'Data Size' (0 for terminate program) : 10
 Enter the 'Minimum Number' : 5
 Enter the 'Maximum Number' : 95
+---------------------+
|     DATA ARRAY      |
+---------------------+
|                  32|
|                  12|
|                  80|
|                  73|
|                  71|
|                  60|
|                  73|
|                  64|
|                  65|
|                  73|
+---------------------+
+---------------------+
|     MARKED DATA     |
+---------------------+
|                  73|
|                  71|
|                  73|
|                  65|
|                  73|
+---------------------+
Press any key to continue . . .
